DevSecOps Engineer focused on integrating security into every stage of the software delivery lifecycle — hardening CI/CD pipelines, containerized infrastructure, and dependency/secret scanning workflows. Background in SOC operations and detection engineering (SIEM, MITRE ATT&CK) brings a threat-informed approach to securing production systems. Strong automation focus using Python, Docker, and Infrastructure as Code.

EXPERIENCE

Freelance DevSecOps Engineer

Jan 2026 – Present

[Limatrix](#) · Remote (Egypt)

- Engineered secure CI/CD pipelines for 3+ production clients, integrating automated security scanning and container hardening into every release
- Designed Docker Compose production infrastructure with strong isolation, cutting deployment time 40% with zero-downtime releases
- Hardened Linux VPS infrastructure end-to-end (access control, firewalling, service isolation); built security dashboards tracking 15+ metrics, reducing incident detection time 30%
- Integrated AI-driven APIs with fault-tolerant design (fallbacks, retries), sustaining 99.9% uptime across 10K+ daily requests

SOC Analyst Intern

Aug 2025 – Sep 2025

[EncryptEdge Labs](#) · Remote (UK)

- Built and maintained a Wazuh + ELK SIEM pipeline processing 10K+ daily logs across 5+ systems
- Developed 10+ Sigma rules aligned with MITRE ATT&CK (T1003, T1021), improving detection coverage
- Identified 15+ critical vulnerabilities via Nessus, reducing MTTR 30% through remediation workflows

TECHNICAL SKILLS

CI/CD & Automation	GitHub Actions, CI/CD pipeline security, Docker, Docker Compose, n8n
Cloud & Infra	Infrastructure as Code, Cloud Security, Linux hardening, Kubernetes (CIS benchmarks, RBAC, Falco)
AppSec / SDLC	Secure SDLC, OWASP Top 10, SAST/DAST, Dependency & Secret Scanning, API Security
Detection & SOC	Sigma Rules, YARA, MITRE ATT&CK, ELK Stack, Wazuh, Threat hunting, Incident response
Programming	Python, Go, Bash, PowerShell, C++

PROJECTS

Kubernetes Security Hardening Lab — Applying CIS benchmarks and auditing RBAC misconfigurations; deploying Falco for runtime threat detection across a local cluster.

Secret Scanner (CI/CD Security Tool) — Python entropy + regex detection engine; prevented 50+ credential leaks via pre-commit enforcement.

Aviation Email Classification System (Production · Nesma Airlines) — LLM-based classification for 500+ emails/day across 17 departments; Docker/n8n/Gemini/Flask pipeline with zero manual triage.

ELK Detection Lab — Dockerized ELK + Wazuh stack simulating Linux credential access (MITRE T1003); Sigma rules compiled to Lucene queries with confirmed detection firing.

Shellcode Detector — Static + behavioral analysis tool targeting shellcode patterns: API hashing, process injection, and AMSI/ETW patching indicators.

Malware Analysis Reports — Published writeups on real-world samples (Agent Tesla, RedLine Stealer) covering static/dynamic analysis, IOCs, and YARA signatures.

EDUCATION, CERTIFICATIONS & LANGUAGES

Misr Higher Institute for Engineering and Technology

Expected June 2027

B.Sc. Information Systems, Network Security Track — Mansoura, Egypt

Certifications: CompTIA Security+ · eJPTv1 · eCIR · CCNA

Languages: Arabic (Native) · English (B2) · German (B1)
